

Breast Cancer

Breast cancer is the 2nd leading cause of cancer death in women in the United States behind lung cancer.

Screening and prevention

The American College of Radiology and Society of Breast Surgeons

recommends that women at average risk of breast cancer should receive annual screening mammograms starting at age 40.

Monthly breast self-exam and annual physical exams by a doctor are essential parts of an overall breast cancer screening strategy.

Know the symptoms!

- A new lump or mass
- Swelling of all or part of a breast (even if no distinct lump is felt)
- Skin irritation or dimpling (sometimes looking like an orange peel)
- Breast or nipple pain
- Nipple retraction (turning inward)
- Redness, scaliness, or thickening of the nipple or breast skin
- Nipple discharge (other than breast milk)

Who is affected?
